Queries

Query 1

```
SELECT c.cName  
FROM Customer c, Product p, OrderDetail od, Shippment s  
WHERE c.cNumber = s.cNumber AND  
       s.oNumber = od.oNumber AND  
       od.pNumber = p.pNumber AND  
       p.pName LIKE '%ware%';
```

Query 2

```
SELECT *  
FROM Product p, OrderDetail od  
WHERE od.pNumber = p.pNumber AND  
       od.oNumber = 3;
```

Query 3

```
SELECT c.cName  
FROM Customer c  
WHERE (SELECT COUNT(od.pNumber)  
       FROM OrderDetail od, Shippment s  
       WHERE od.oNumber = s.oNumber AND  
             s.cNumber = c.cNumber  
       ) = 3;
```

Query 4

```
SELECT p.pName, m.mName  
FROM Product p, Manufacturer m  
WHERE p.mNumber = m.mNumber AND p.pUnitprice > 100;
```

Query 5

```
SELECT DISTINCT cName
FROM Customer
WHERE cName not in (
  SELECT DISTINCT c.cName
  FROM Customer c, Shippment s, OrderDetail od
  WHERE c.cNumber = s.cNumber AND
        s.oNumber = od.oNumber AND
        od.pNumber in (
          SELECT DISTINCT p.pNumber
          FROM Product p, Customer c, Shippment s, OrderDetail od
          WHERE c.cName LIKE 'Frank%' AND
                c.cNumber = s.cNumber AND
                s.oNumber = od.oNumber AND
                p.pNumber = od.pNumber));
```

Query 6

```
SELECT c.cName
FROM Customer c, Shippment s, OrderDetail od
WHERE c.cNumber = s.cNumber
AND s.oNumber = od.oNumber
GROUP BY c.cName HAVING COUNT(DISTINCT od.pNumber) = (SELECT COUNT(*) FROM Product);
```

Query 7

```
select c.cname, min(o.oQuantity), max(o.oQuantity)
from shippment as s join orderdetail as o on s.oNumber = o.oNumber
join customer as c on c.cnumber = s.cnumber
group by c.cname;
```

Potential Issues

The problem with having cost as part of the order detail table is that it creates redundancy in the data. We want to avoid putting calculable values in tables because it wastes storage space. We already have the unit price in the product table so it is possible to calculate the cost by multiplying the price and the

quantity. Also since cost is dependent on the price it doesn't really make sense to keep them separate. If for some reason, the price was changed and the order would have to be modified, we would have change the data from two fields instead of one. If we simply remove the cost from the order detail table we fix this redundancy.
